

```

1 import java.util.Scanner;
2 public class PowerofNumber{
3     public static void main(String[]args){
4         Scanner sc=new Scanner(System.in);
5         System.out.print("Enter the base: ");
6         int base=sc.nextInt();
7         System.out.print("Enter the exponent: ");
8         int exponent=sc.nextInt();
9         int power=1;
10        if(exponent<0){
11            System.out.println("negative exponent is not supported for integer output. ");
12        }else{
13            for(int i=1;i<=exponent;i++){
14                power=power*base;
15            }
16            System.out.println(base+"raised to the power"+exponent+"="+power);
17        }
18        sc.close();
19    }
20 }
21

```

Enter the base: Enter the exponent: 2raised to the power5=32
